# Premium Layer Pellets

CopRice Premium Layer pellets are a complete pelleted layer feed formulated specifically for hens producing table eggs in the home flock. CopRice Premium Layer pellets are based on rice and rice bran, which are excellent suppliers of Linoleic acid (omega 6 fatty acid) along with a balanced supply of essential amino acids, helping to produce large, good quality eggs with great nutritional value.

Rice and rice bran added to the blend of high quality ingredients, fortified with vitamins, minerals, trace elements and essential amino acids add an excellent nutritional balance to aid the hens healthy life, good egg production and shiny, healthy feathers.

CopRice Premium Layer Pellets contain natural pigmentation derived from marigold extract, which, when combined with vegetable and fruit scraps, green pasture and other plants, help produce good egg yolk pigmentation.

CopRice Premium Layer Pellets contain high levels of calcium, to ensure good shell strength and quality. The calcium: phosphorus ratio is at an optimum level to provide a good balance for bone strength, optimum egg production and a healthy life.

## Feeding Guidelines:

- ✓ Ensure CopRice Premium Layer pellets are available to hens at all times
- ✓ Hens can consume approximately 100g to 140g per head per day
- ✓ Always ensure that hens have access to cool, clean water at all times.
